Art Unit: 3746

Restriction to one of the following inventions is required under 35 U.S.C. 121:

 I. Claims 9 to 11, 23 and 24, drawn to a rotary piston internal continuous combustion engine, classified in class 123, subclass 204.

II. Claims 12, 13 and 27, drawn to a rotary piston steam engine having means for recovering used steam, classified in class 60, subclass 670.

III. Claims 17 to 20 and 31 to 34, drawn to a rotary piston expansible chamber heart pump, classified in class 604, subclass 151.

IV. Claim 25, drawn to a rotary piston internal continuous combustion engine wherein cooling water changes to steam which is used for power production, classified in class 60, subclass 618.

The inventions are distinct, each from the other because of the following reasons:

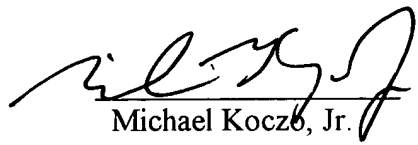

Inventions I to IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, such as the internal combustion engine, steam engine and heart pump are clearly not capable of use together.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3746

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Claims 8, 14, 15, 16, 21, 22, 26, 28, 29, 30 and 35 will be examined with the claims of the elected invention.
